

# NameSilo's WHMCS Registrar Module and SYNC Script

## Installation Instructions

Installing the NameSilo module for WHMCS is easy and only takes a few minutes. This module allows WHMCS to interface with NameSilo's API to provide Registration, Transfer, Renewal, EPP Authcodes, DNS management and domain updates to be processed in real-time. In addition we have included a script to sync Expiry and Due Dates for domains to ensure even if something changes outside of WHMCS that it will remain up-to-date.

### To Install the module:

1. Upload the "namesilo" folder to your WHMCS Registrar Modules Directory with a standard FTP client. (eg, <http://www.yourdomain.com/whmcs/modules/registrars/namesilo>)
2. Log in to WHMCS, under "Setup" click on "Domain Registrars" select "NameSilo" from the list.
3. Fill in the details. **\*NOTE: Only your live API key is required. All other fields are optional at this time.**
4. If you wish to use the SYNC script to update the domain's expiry and due dates (if selected in the setup of the registrar module) you will need to setup a CRON tab to run the "namesilo-sync.php" script. Our recommendation would be to have this run nightly to ensure the information displayed to your client's is as current as possible.

### To Upgrade the module:

1. Upload and overwrite the existing namesilo folder in your WHMCS Registrar Modules Directory with a standard FTP client (eg, <http://www.yourdomain.com/whmcs/modules/registrars/namesilo>).
2. Log in to WHMCS and under "Setup" click on "Domain Registrars" select "NameSilo" from the list.
3. Update any details that are still blank.

### Support

If you have any questions, suggestions, or bug issues please feel free to email [support@namesilo.com](mailto:support@namesilo.com).
